

SUMMARY

Experienced Senior Associate Software Developer specializing in Information Technology Platform Engineering. Skilled in Cloud Computing, DevOps, and Digital Technologies, with a proven track record of implementing technological solutions to enhance customer experience. Possesses strong interpersonal skills and a comprehensive technical skill set.

SKILLS

Cloud Platform: OpenStack & VMware

Ansible

Terraform

CI/CD Pipelines

kubernetes

Jenkins

Monitoring stack (ELK,PGA)

Python

AWS (EC2, route53, load balancer, api gateway, cloudfront, cloudtrail, S3, EKS)

Java

MySQL

PROFESSIONAL EXPERIENCE

Senior Associate Software developer – Platform Engineering

Nov '20 - Present

NPCI

Hyderabad, India

- Proficient in advanced programming within Open-source environments and DevOps methodologies.
- Deployed and secured an OpenStack platform for internal use, employing Infrastructure as Code (IAC) principles with Terraform for automation.
- Automated provisioning tasks and security rule management in OpenStack using Terraform and GitLabRunner, ensuring efficient pipeline triggers through commit statements.
- Leveraged Configuration Management Tool (Ansible) for seamless automation of OS-level changes and enhancements, optimizing the performance of the open-source cloud platform.
- Implemented containerization solutions using Kubernetes and Docker, deploying Rancher with RKE.
- Proficient in the DevOps lifecycle, automating routine tasks through Ansible playbooks and Jenkins pipelines.
- Actively involved in resolving critical P1 and P2 incidents in production environments, addressing defects and implementing enhancements promptly.
- Managed VMWare Private Cloud, specializing in VCenter, VSphere, and solid fire storage concepts.
- Created automation scripts using Python, Ansible, and other tools to streamline NSX-T deployment and management tasks.
- Proficient in Kubernetes deployment, configuration, and management, Skilled in creating Kubernetes deployments, services, ingress, and persistent volume claims (PVCs) for scalable and resilient applications.
- Implemented Kubernetes controllers and operators for automated application deployment, scaling, and management, Ensured Kubernetes security with RBAC and network policies, while maintaining compliance with industry standards.
- Configured monitoring solutions like Prometheus and Grafana for Kubernetes cluster health monitoring and performance analysis.
- Experienced in deploying and managing scalable applications on Amazon EC2, configuring Route 53 for DNS management and failover, and optimizing traffic distribution with Elastic Load Balancers.
- Proficient in developing RESTful APIs using API Gateway, integrating with AWS Lambda, and delivering content globally via CloudFront.
- Skilled in logging and monitoring account activity with CloudTrail, managing S3 for scalable storage, and securing data with encryption and IAM roles.
- Adept at deploying containerized applications on EKS and automating CI/CD pipelines for high availability and scalability.

INTERNSHIPS

Research and Development Trainee

Jan '20 - Jul '20

BNP Paribas

Chennai, India

- Involved in the requirements gathering phase and the technical design of the same
- Trained and worked on JAVA, Ext JS and SQL
- Got exposure to Banking sector and the implementation of security protocols.

CERTIFICATION

- Completed a certification course in C and C++ programming languages
- Completed an online certification course on Programming with Python from INTERNSHALA
- Currently advancing towards becoming a Certified Kubernetes Administrator
- Certified Kubernetes Administration (**CKA**) (Linux Foundation)

Education

- 2016-2020 - Compute Science and Engineering CGPA - 8.37
Sathyabama University, Chennai
- 2015-2016 - intermediate CGPA - 9.3
Sri Chaitanya Junior College - Vijayawada
- 2013 -2014 - Secondary School CGPA - 9.2
Montessori High School - Kurnool

ACADEMIC PROJECTS

- Title: Multiple Colour Detection
Description: It is a model based on the Image Processing technique which can detect multiple colors based on the pixel value and it is useful in separating the one coloured objects from the other based on the given range that is upper and lower limit of the colour (BGR) values, using Python programming language.
- Title: Visual Image Search
Description: Visual image search can easily identify the object by simply querying through image of the object not by the name of object. Inserting the image that need to be searched and post it to get related output images that are looking for. The project is developed with Python by training the set of images as a data.
- Title: Child Agony Act Detection
Description: Observing the child, in the day care centres through video streaming and alerting the parent if some un-usual activity is detected against a child through message system. The project is developed with Python programming using MATLAB and message alerting system through Java.

EXTRACURRICULAR ACHIEVEMENTS

- Attended the school level competition on Chess and secured second place out of 50 participants.
- Actively participated in the Marathon organized by Titan foundation and completed the 10k run.
- Raised funds for COVID-19 relief through volunteering efforts with college charity organization
- Helped and mentored at local high school coding clubs to teach programming to the students and organized a coding competition among them.
